

**Dear ladies and gentlemen,
Dear exhibition participants and guests,**

It is my pleasure, both personally and on behalf of the Ministry of Construction, Housing and Communal Services of Uzbekistan, to welcome all participants and guests of the **14th International Exhibition for Heating, Ventilation, Air Conditioning, Water Supply, Plumbing, Swimming Pools, Environment and Renewable Energy – Aquatherm® Tashkent 2026**.

In recent years, Uzbekistan's construction industry has grown rapidly and become one of the main drivers of the national economic growth. Expansion of construction activity has been accompanied by increasingly stringent requirements for the quality, energy efficiency and environmental sustainability of buildings, as well as the widespread adoption of modern construction materials, advanced technologies and innovative solutions.

The modern technologies and solutions presented at **Aquatherm® Tashkent 2026** offer construction companies, developers, designers and industry professionals extensive opportunities to learn about the latest international developments, exchange practical experience and establish new business contacts.

I am confident that the exhibition will become an effective platform for strengthening international and business cooperation, implementing new joint projects, sharing knowledge and experience, and transferring modern technologies into the construction industry, housing and utility sectors in Uzbekistan.

I wish all exhibition participants and guests every success in their work, fruitful negotiations, mutually beneficial agreements and promising new projects!

Yours faithfully,

**Davron Adilov,
Deputy Minister of Construction,
Housing and Communal Services
of Uzbekistan**
