- ▶ Machinery Central Asia 2026 is the International Exhibition of digital technologies, automation, artificial intelligence, and Industry 4.0 solutions for intelligent industrial manufacturing
- ▶ The platform serves as a key professional hub, offering companies unique opportunities for G2B and B2B networking. It enables participants to showcase solutions designed to improve productivity, enhance energy efficiency and increase transparency across production processes, demonstrate the tangible benefits of digital technologies and adapt products and services in line with evolving industry requirements.

Foundation year: 2008

Status: International Event

MAJOR EXHIBITION SECTIONS

- Intelligent Manufacturing and Industry 4.0
- Flexible and Adaptive Production Systems
- Robotics and Process Automation
- Digital Technologies
- Machine Vision and Intelligent Monitoring
- Big Data and Industrial Data Analytics

Machinery Central Asia – an effective gateway to the markets of Uzbekistan and the wider Central Asian region. Participation in the exhibition provides direct access to industrial enterprises, large-scale infrastructure projects and public-sector clients driving strong demand for advanced technologies and modern engineering solutions.

The exhibition brings together local and international companies, creating opportunities for technology transfer, production localisation, establishment of joint ventures, and sustainable long-term presence in the region

Machinery Central Asia enables companies to introduce new technologies to the market ahead of competitors, expand their client base, and secure strategic positions within the industrial ecosystem of Uzbekistan and Central Asia.

KEY DEVELOPMENT AND IMPLEMENTATION HIGHLIGHTS:

Industrial automation in Uzbekistan has been developing steadily and, in recent years, has attracted increasing attention from the government, business community and international companies.

A strategic focus on digitalisation: Uzbekistan is actively advancing development of a digital economy and adoption of Industry 4.0 principles, creating opportunities to secure the leading positions in emerging technologies.

Strong potential in automation and robotics: Uzbekistan is actively pursuing the digital transformation of its manufacturing sector and adoption of robotics in industrial processes. This creates opportunities for international companies to transfer advanced technologies and integrated solutions.

Strong potential in automation and robotics: Uzbekistan is actively pursuing the digital transformation of its manufacturing sector and adoption of robotics in industrial processes. This creates opportunities for international companies to transfer advanced technologies and integrated solutions.
